

Thursday, April 7, 2016: Animal Life with Joan Morris

Birding Information: Mixed intensity fires and native beetles create some of the most productive and critical habitats for California birds and wildlife. Christy Sherr, retired Park Ranger and active field biologist and Education Coordinator for the John Muir Project of the Earth Island Institute will discuss the implications for species such as the Black-backed Woodpecker.

Main program: Animal Life with Joan Morris

Main Program: Joan Morris joined the Contra Costa Times in 1988 as a general assignment reporter. In 2013, when the venerable Gary Bogue announced his retirement, Joan was chosen to take over his pets and wildlife column and tasked with making it her own. Her column, Animal Life, appears in the Bay Area News Group papers five days a week. Joan will share some of the funniest and oddest questions she has received in the past three years. She will also be happy to answer questions on gardening with wildlife and how to keep critters out of your yard.

Joan was born in Texas, raised in New Mexico and has been a semi-native Californian for almost 28 years. In 2006, she became the Home and Garden editor of the Times and founded Our Garden, a demonstration garden run by the Contra Costa Master Gardeners. Last year, the garden added an owl box and five bluebird boxes.

More detailed information about the April program is available in our April 2016 Quail newsletter. (Photo Credit: Joan Morris)
